#### Web Sockets

#### WebSockets

Last time we saw how to establish a WebSocket connection

Today, we'll parse and send messages over the socket

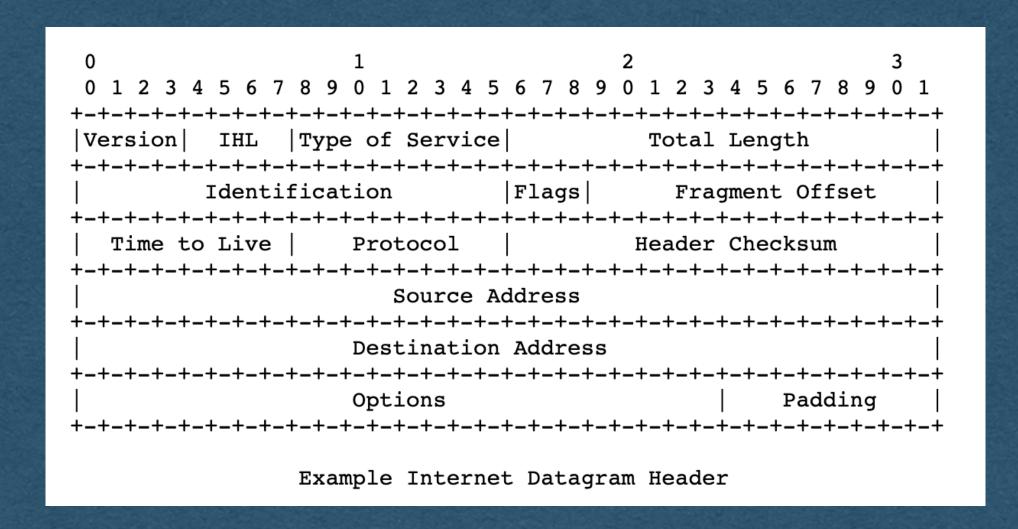

```
R|R|R| opcode M| Payload len | Extended payload length
I|S|S|S|
                                           (16/64)
                 (7)
                                 (if payload len=126/127)
N|V|V|V
    Extended payload length continued, if payload len == 127
                              Masking-key, if MASK set to 1
Masking-key (continued)
                                 Payload Data
                   Payload Data continued ...
                    Payload Data continued ...
```

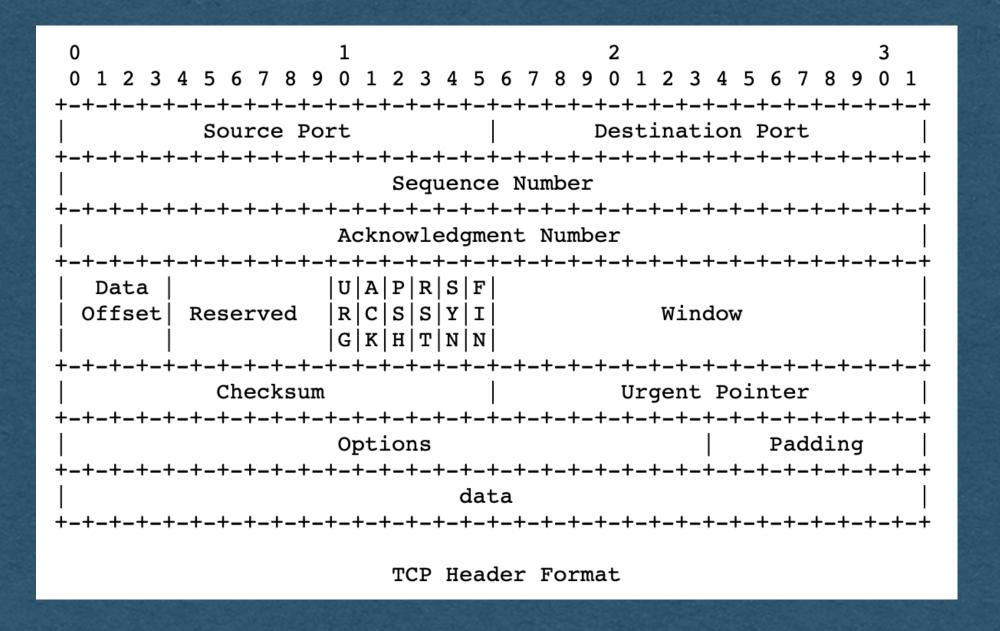

#### Protocols Sidenote

- Many of the protocols used in the Internet define the order and meaning of bits that are sent
  - Sender assembles the bits of a message following the protocol
  - Send the bits through the Internet
  - Receiver interprets the bits following the same protocol to extract meaning from the bits
- Protocols enable communication using only 1's and 0's

#### Protocols Sidenote

- TCP/IP protocol headers shown here
- Routers read the IP header following this protocol to know how to route a packet
- Endpoints follow the TCP protocol to assemble a sequence of packets and send it to the process using the given port

- The WebSocket protocol functions the same way
- Client and server agree to follow this protocol
- Send bits in this specific order
  - We can rely on the client following this protocol

## Parsing Bits

- We will have to read frames at the bit level
  - It's already in a byte array when we receive it
  - We can access any byte and extract the bits we need
  - Helpful to recall that bytes are represented as 8-bit integer values (0-255)

0 1 0 1 2 3 4 5 6 7 8 9 0 +-+-+-+	1 2 3 4 5	2 6 7 8 9 0 1 2 3 4 5 6 7	3 7 8 9 0 1
F R R R  opcode M  Page	yload len (7)	Extended payload le (16/64) (if payload len==126	į
	length cor	tinued, if payload len	== 127   +
		Masking-key, if MASK se	et to 1
Masking-key (continu	ed)	Payload Data	
:	Payload Dat	a continued	:
+	 Payload Dat	a continued	+    +
			-

## Parsing Bits

- Bit Example To read the opcode:
  - get the byte at index 0
  - Bitwise AND (& in most languages) this byte with a "bit mask" of 15
  - Since 15 == 00001111 as a byte this will 0 out the 4 higher order bits
  - We now have an int from 0-15 representing the opcode

0 1 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5	2 6789012345678901	
F R R R  opcode M  Payload len  I S S S  (4)  A  (7)  N V V V   S     1 2 3   K  +-+-+-+	Extended payload length   (16/64)     (if payload len==126/127)	
+	++  Masking-key, if MASK set to 1

- MASK: Mask bit
  - Set to 1 if a mask is being used
  - Set to 0 if no mask is being used
- This will be 1 when receiving messages from a client

- The next bits will represent payload length in bytes
  - Similar to Content-Length
- The length can be represented in 7, 16, or 64 bits

0 1 0 1 2 3 4 5 6 7 8 9 0 1 +-+-+-+	2 3 4 5	2 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 ++

Masking-key (cont	inued)	Payload Data	
: +	Payload Data continued		
Payload Data continued			

- After all the length bits:
  - If the MASK bit == 1, the next 4 bytes (32 bits) is the mask
  - If the MASK bit == 0, the payload begins

0			
F R R  opcode   M   Payload len   Extended payload length			
Extended payload length continued, if payload len == 127			
Masking-key, if MASK set to 1			
Masking-key (continued)   Payload Data			
Payload Data continued			
Payload Data continued			

- If there is a mask, read these 4 bytes
- The mask will be randomly generated by the client for each message
  - You must parse this each time a message is received

+-+-+-++-++  F R R R  opcode M  Payload len    I S S S  (4)  A  (7)    N V V V  S       1 2 3   K    +-+-+-+	2 3 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 Extended payload length (16/64) (if payload len==126/127)
+ +	Masking-key, if MASK set to 1
Masking-key (continued)	Payload Data
Payload Data continued	
Payload Data continued	

- Each 4 bytes of the payload has been XORed with the mask by the client
- Read the payload 4 bytes at a time and XOR the bytes with the mask
- If the length is not a multiple of 4, use only the bytes of the mask that are needed
  - le. Always reading 4 bytes will cause an index out of bounds error

0 1 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 +-+-+-+	2 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1

Payload Data continued	

## XOR Example

- If 4 bytes of the message are:
  - 01001001\_01000011\_01010101\_00100001
- And the random mask is:
  - 01111011\_00100010\_01110101\_01110011
- This part of the payload will be "message XOR mask":
  - 00110010\_01100001\_00100000\_01010010
- When we receive these bits and XOR it with the mask again we get the original message bits:
  - 01001001\_01000011\_01010101\_00100001

- Once the payload is XORed with the mask 4 bytes at time we get the entire message
- Then process the message

0 1 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 +-+-+-+	2 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
F R R R  opcode M  Payload len  I S S S  (4)  A  (7)  N V V V   S     1 2 3   K	Extended payload length (16/64) (if payload len==126/127)
	ntinued, if payload len == 127
	Masking-key, if MASK set to 1
Masking-key (continued)	Payload Data
Payload Data continued	
Payload Data continued	

- To send a message to a client:
  - Use this same format
  - Assemble a byte array with the appropriate values
  - Append your payload as bytes

- Do not use a mask when sending frames to a client
  - No caching concerns on server to client frames

	2 3 4 5 6 7 8 9 0 1
+-+-+-+-+	Extended payload length (16/64) (if payload len==126/127)
+-+-+-++-++-+++	
+	Masking-key, if MASK set to 1
Masking-key (continued)	Payload Data
Payload Data continued	
Payload Data continued	
•	

- Example: For our purposes in the HW
  - RSVs are always 0
  - opcode is either 0001 (Sending text), 1000 (close connection), or 0000 (continuation frame)

0 1 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 +-+-+-+	2 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
F R R R  opcode M  Payload len  I S S S  (4)  A  (7)  N V V V  S     1 2 3   K  +-+-+-+	Extended payload length (16/64) (if payload len==126/127) -++ ontinued, if payload len == 127
+	++  Masking-key, if MASK set to 1
Masking-key (continued)	Payload Data
Payload Data continued :	
Payload Data continued	

- Check the length of your payload to determine how many bits are needed for the length
- Follow the same format for payload length as the received messages

0 1 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 +-+-+-+	2 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1

## Large Message

- You will sometimes receive very large messages from client that will be sent in multiple frames (>131,000 bytes in Chrome)
  - Fin bit will be 0 until the last frame
  - opcode will be 0000 for all but the first frame
  - Payload length is only the length of that frame

0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5	2 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
